WALLMEK
í Kungälv AB

Company profile:

Wallmek i Kungälv AB was started in 1978, producing and designing special tools for car repairs. Wallmek stands for idea and design of tools, up to delivery of a complete product to the customer. Our products are in the segments of chassis tools and liquid handling equipment.

The Wallmek research and development department works in close cooperation with automotive workshops to ensure the best possible productivity, ergonomics and health. We are very good at designing hydraulic tools that enable repairs directly on the car, handling of fuel when tank repairs are necessary and to make drainage systems for car dismantlers. Today Wallmek is developing tools directly for car manufacturers, after market and garages. For the car dismantling industry, we develop tools for draining all liquids from the cars to make them environmentally decontaminated.

As the company continues to expand, we are now also involved in customer segments like trucks, trailers and constructions machinery. In short terms – we develop Wallmek in a direction where our products make the best use for our customer.

Our mission:

To develop, produce and market our cost effective tools to our customers.

Important for us:

Quality! – To exceed the customers expectations.

Design! – Ergonomic, well thought out and functional products.

Customer care! – Being present and always available for support.

Welcome to Wallmek i Kungälv AB

04-00028 Hydraulic ball-joint puller, 8,8 ton

New and unique design that efficiently presses out the ball joints and brake/slack adjuster on trucks, busses and trailers. Also wheel bolts are dismounted and mounted very smoothly thanks to the flexible design (see pictures below).

The press tools can be rotated for different ground heights, the two supplied distance rings provide the adjustment options required for these jobs. The anvil tool has an opening of 42 alt 57 mm depending on what side is chosen. In addition, the two tools can change position on the cylinder for superior access in tight areas inside the wheelhouse, around sway bars or hidden steering joints on buses, etc.

The hydraulic cylinder presses up to 8.8 tonnes for easy, safe and smooth removal. A safety belt is supplied with the tool to prevent the tool from falling down during work.

Used with 700 bars of hydraulic pump 1030, or 1036.

INVEST IN TIME

After a few years on the road it's a time consuming effort to dismount most parts that's been exposed to water, salt and wear. With the right design and function of the tool system there are many hours to be saved every day when working under the vehicle.

The Wallmek tool system gives the shop the possibility to work more efficient and easier. The basic parts in the tool system are used for many different models and type of jobs, this makes the investment even more obvious, economical and efficient.

The right tools in not a cost, it's the best investment in the technician's potential to get the job done quicker and safer. The expensive tool is the one that doesn't get the job done at all or break due to bad quality when you need it the most.

Today's shops want skilled and experienced technicians that doesn't get injured due to his job. Ergonomics and working environment are the basic things that makes it possible to keep the best technicians in the shop, loving what they do. The shop will then increase the productivity and the skill level gets higher every day.

03-00025 Dismantling set, Volvo/Renault/DAF floating brake disc

A brand new tool that really helps when Volvo's floating brake discs need to be removed. The disc brake is pressed out one cylinder at a time. This is very efficient and saves a great deal of time in the workshop. Pressing at extreme pressure using a workshop press on sensitive metal parts or cutting off the thick brake disc are both noisy and dangerous operations.

The tool consists of two special cylinders and a control valve for crosswise pressing. Pressing out the disc in this way only takes a few minutes. Used with 1030 and 1036.
